DETAILED ACTION

Election/Restriction

1. Applicant's election without traverse of Group I, claims 1- in Paper No. 6 is acknowledged.

Specification

2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Vaartstra (US 6,010,969).

Regarding claims 1 and 2, Vaartstra discloses a capacitor comprising : a lower electrode (13), a ferroelectric layer (11) formed on the lower electrode, wherein an upper surface of the ferroelectric layer including a convex region (between two concave

Art Unit: 2811

regions); and an upper electrode formed on the ferroelectric layer and thoroughly covered the concave region. See Fig.1.

Regarding claims 3 and 4, as shown in Vaartstra Fig.1, a convex region is formed also on an upper surface of lower electrode layer and is thoroughly covered with the ferroelectric layer.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 5 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Vaartstra.

Vaartstra teaches all the limitations of claims 1-4 as shown above but does not explicitly teach that a height of the convex region formed on the upper surface of the ferroelectric layer is half or smaller than the thickness of the ferroelectric layer and is in a range from the same as to half the thickness of the upper electrode layer, and wherein a height of the convex region formed on the upper surface of the lower electrode layer is half or smaller than the thickness of the lower electrode layer and is in a range from the

Art Unit: 2811

same as to half the thickness of the ferroelectric layer.

It would have been obvious to one of ordinary skill in the art to provide the convex region having the height as claimed because the height of convex region in the range as claimed, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. In re Aller, 105 USPTO 233.
